Employment

WebToMed L.L.C., Schaumburg, Illinois   Jul. 2017 - present
Full Stack Developer - LAMP, Symfony, JavaScript, RequireJS, Gulp and Sass
- Engaged in development of 20+ websites and 5+ enterprise web applications with a small team using Scrum/Agile development methodology with weekly sprints and daily stand-ups.
- Developed application features including integrating internal API's, complex financial report generation, managing user access with specific roles and e-commerce solutions with code that is well commented, peer reviewed and follows PSR standards.
- Independently developed a new feature to enable scheduling of recurring credit card payments.
- Volunteered to develop a new application build pipeline by using gulp task runner that increased page load speed.
- Increased my speed of bringing tasks from planing, development to review and close by tracking time while being aware of details and any possible unintended side effects introduced by my code.
- Engaged in on-boarding new hires by pair programming and training which allowed them to contribute to the team more quickly and effectively.
- Implemented unit tests for all new code and wrote database migration scripts.
- Received excellent feedback and performance reviews from senior developers and techleads.

Freelance Web Developer   Aug. 2016 - Jul. 2017
- Developed 10+ websites for clients from scratch using HTML5, CSS3, Javascript, PHP and Wordpress backend.
- Setup hosting, SSL certificate and domain names for clients websites.
- Consulted with clients in person and remotely and built projects from design phase to deployment.

Projects

Code is available to view on GitHub and links to live sites on KonradGnat.com
- *A4M.com* (PHP, JavaScript) - Part of a small team that developed this enterprise web app with tens of thousands of global users. Engaged in implementing the medical provider directory search feature.
- *Tank Battalion* (NodeJS, JavaScript) - Developed completely from scratch a 2D single and multi-player game with the canvas element. It uses SocketIO to connect users in multiplayer mode.
- *ReadBooks* (NodeJS, Express, MongoDB) - Developed a web app with user login with social media account, features creating posts and comments.
- *GifNotes* (NodeJS, Express) - Led a small team that developed a web app that creates gifs from video using Gfycat API. Won an award for best new business idea at GIF Hack 2017.
- *Live Sports 360 VR* (NodeJS, JavaScript) - Developed a web app that live streams VR video using the Wowza video streaming platform. Won an award at DevWeek Hackathon 2017 in San Francisco.
